E-Cycle Bronze: E-Waste Master

Remove Redundant IT Equipment Professionally & Painlessly

Vast amounts of old, unwanted and failed IT equipment sit stored in businesses and organisations throughout the UK. New legislation, such as the Hazardous Waste Regulations, mean that disposing of this equipment is now highly regulated and failure to comply can cost a business dearly.

E-Cycle Bronze provides a fully licensed, accredited and professional service to remove such equipment and dispose of it in an environmentally and legally sound manner.

Changes such as the reclassification of CRT monitors, which are now hazardous material, prohibit and restrict the landfill of such equipment that must be pre-treated in accordance with strict guidelines. Businesses need to demonstrate that they are disposing of redundant IT technology to defined standards. Partner X offers E-Cycle Bronze as a complete solution, taking away the headache from your business so that you can concentrate on your core activities.

Firstly, our specialist logistics collect your loose IT equipment, palletise and return it for processing. Once equipment has been received at the processing plant, redundant equipment will be recycled in accordance with the highest standards of environmental legislation. All hazardous waste, such as CRT monitors and UPS batteries will be treated in accordance with hazardous waste legislation to ensure that your business is completely compliant.

Our service is highly accredited and fully licensed. The service is backed by ISO9001:2000 (Quality) and ISO 14001:2004 (Environmental) standards whilst all our processing is full Waste Management Licensed and movement of material covered by Waste Carrier Licensing.

Reporting includes full details of each shipment processed. A full Certificate of Environmental Disposal also backs each report.

Architect of an Open World™

Key Features

- Collection and return service
- Fully Licensed Transport
- Environmental Disposal
- Hazardous Waste Processing
- Certificate of Data Erasure
- Certificate of Environmental Disposal

GlobalCare IT Disposal Services

Hazardous Waste Directive – July 2005

Essentially replacing the older Special Waste system, the new legislation has two major impacts on businesses with redundant IT equipment. Firstly, it reclassifies CRT monitors as hazardous material for the first time in UK law along with other hazardous IT equipment such as UPS batteries. Secondly, it requires any site that produces more than 200Kgs of such waste product per annum to register with the Environment Agency as a producer of Hazardous Waste. Thereafter the movement and treatment of that material has to be carried out in accordance with strict guidelines.

WEEE Directive - January 2007

The WEEE (Waste Electrical and Electronic Equipment) Directive is an EU wide directive designed to make manufacturers and importers (the 'producer') responsible for the cost of disposal of redundant equipment. The Directive sets targets for recovery and recycling across ten categories of products (Category 3 is IT and Telecoms).

The following alternative disposal packages are available from Bull:

- **E-Cycle Gold**
Secure Compliance
 - **E-Cycle Silver**
Data Guard
