E-Cycle Silver: Data Guard

Dispose of Redundant IT Equipment Securely

Designed for organisations aware that redundant IT equipment requires professional, secure data eradication along with certified environmental disposal. E-Cycle Silver negates potential litigation and the highly damaging PR impact of sensitive data entering the public domain.

In a world where security in general, and the Data Protection Act in particular, has never had more significance, electronic data, unseen and often unaccountable, sits like a timebomb on redundant technology even after many in-house erasure or formatting processes.

E-Cycle Silver offers two principle benefits to all organisations disposing of unwanted IT technology.

Asset Security Guaranteed removal of all electronic data

Environmental Disposal Non-landfill & legally compliant recycling

Firstly, our specialist logistics collect your loose IT equipment, palletise and return it for processing. Every asset will then be registered and uniquely bar coded to provide complete traceability.

The electronic data will be purged or eradicated to approved government CESA standards to ensure no sensitive data enters the public domain and all data processing is carried out by Home Office Security cleared personnel for complete security. We process all forms of media including HDDs, FDDs, tape drives, CCTV footage and Optical Discs.

Once equipment has been securely purged, redundant equipment will be recycled in accordance with the highest standards of environmental legislation. All hazardous waste, such as CRT monitors and UPS batteries will be treated in accordance with hazardous waste legislation to ensure that your business is completely compliant.

Reporting includes asset-level detail to audit standard and transparent analysis of the processing undertaken for each item. Each report will be backed up by a Certificate of Data Eradication and Certificate of Environmental Disposal. All data eradication is backed by £1M of Professional Indemnity Insurance.

- #### Key Features
- Collection and return service
 - Asset registration
 - Secure data erasure/eradication
 - Asset level & audit quality reporting
 - Environmental Disposal
 - Hazardous Waste Processing
 - Certificate of Data Erasure
 - Certificate of Environmental Disposal
 - Professional indemnity for data erasure

GlobalCare IT Disposal Services

Hazardous Waste Directive – July 2005

Essentially replacing the older Special Waste system, the new legislation has two major impacts on businesses with redundant IT equipment. Firstly, it reclassifies CRT monitors as hazardous material for the first time in UK law along with other hazardous IT equipment such as UPS batteries. Secondly, it requires any site that produces more than 200Kgs of such waste product per annum to register with the Environment Agency as a producer of Hazardous Waste. Thereafter the movement and treatment of that material has to be carried out in accordance with strict guidelines.

WEEE Directive – January 2007

The WEEE (Waste Electrical and Electronic Equipment) Directive is an EU wide directive designed to make manufacturers and importers (the 'producer') responsible for the cost of disposal of redundant equipment. The Directive sets targets for recovery and recycling across ten categories of products (Category 3 is IT and Telecoms).
